

ABSTRACT OF THE DISCLOSURE

A roof rail in which a rail portion and a plurality of leg portions are integrally molded by use of a mold having a fixed or movable dam provided in a mold cavity, and which is formed of a polyamide resin composition containing a polyamide resin having a crystallization temperature of not higher than 210°C and a glass transition temperature of not higher than 70°C and glass fiber, wherein the difference in surface gloss between the surface of the rail portion and the surface of the leg portion is not higher than 5, and the difference in surface roughness between the surface of the rail portion and the surface of the leg portion is not larger than 0.5 μm .
